

EXP-NO: 12 Write a code using RAW sockets  
10/10/25 to implement packet sniffing.

AIM: To implement a packet sniffer using RAW sockets.

CODE:

```
from scapy.all import sniff
from scapy.layers.inet import IP, TCP, UDP, ICMP
```

```
def packet_callback(packet):
```

```
    if IP in packet:
```

```
        ip_layer = packet[IP]
```

```
        protocol = ip_layer.proto
```

```
        src_ip = ip_layer.src
```

```
        dst_ip = ip_layer.dst
```

```
        if protocol == 1:
```

```
            protocol_name = "ICMP"
```

```
        elif protocol == 6:
```

```
            protocol_name = "TCP"
```

```
        elif protocol == 17:
```

```
            protocol_name = "UDP"
```

```
        else:
```

```
            protocol_name = "Unknown Protocol"
```

```
        print(f"Protocol: {protocol_name}")
```

```
        print(f"Source IP: {src_ip}")
```

```
        print(f"Destination IP: {dst_ip}")
```

```
        print("-" * 50)
```

```
sniff (iface = 'Wi-Fi', prn = packet_callback,
      filter = "ip", store = 0)
```

sample input

Protocol: TCP

Source IP: 192.168.1.10

Destination IP: 142.250.72.14

Protocol: ICMP

Source IP: 192.168.1.10

Destination IP: 8.8.8.8

Protocol: UDP

Source IP: 192.168.1.10

Destination IP: 192.168.1.1

RESULT:

- \* The packet sniffer successfully captures
- \* IP packets on the network, identifying their protocol type, source IP & destination IP.
- \* This demonstrates the use of RAW sockets for monitoring network traffic in real-time

$\frac{10}{10}$   $\frac{13}{13} \times 125$

```
from scapy.all import sniff
from scapy.layers.inet import IP, TCP, UDP, ICMP
```

```
def packet_callback(packet):
```

```
    if IP in packet:
```

```
        ip_layer = packet[IP]
```

```
        protocol = ip_layer.proto
```

```
        src_ip = ip_layer.src
```

```
        dst_ip = ip_layer.dst
```

```
    # Determine the protocol
```

```
    protocol_name = ""
```

```
    if protocol == 1:
```

```
        protocol_name = "ICMP"
```
